PFS12R

The PFS12R is an extreme service flag that is designed to withstand conditions where mud, dust and freezing temperatures occur. This Flag works extremely well in high wind conditions. The temperature range of the PFS12R is from -60 degrees Celsius to 130 degrees Celsius.

The 3M reflective strip provides an excellent means of marking in night conditions.

The applications of this flag include the Snow Marking Flag System, Pipeline Marking Flag Systems, Snow Mobile Flags, All-Terrain Vehicle Flags, Emergency Marking and other various applications.
