ATV & Snowmobile "WHIPSTICK"

The new ATV & Snowmobile **WHIPSTICK** is a revolutionary design to produce a well lighted Whip with Flag which incorporates materials to protect the Rider of All Terrain Vehicles and Snowmobiles.

Using Polycarbonate Materials, Polyolefin Heat Shrink, Electroluminescent Wire, Foam Ball and Weatherproof Flag Material, This **WHIPSTICK** has been designed to soften the impact from a regular fiberglass whip from whipping the operator.

The Polycarbonate Tubing with the Foam Ball can literally "Whack" the Operator with only the feeling that you have been hit but without any injury or pain to the operator of the All Terrain Vehicle or Snowmobile.

The base of the **WHIPSTICK** uses an internal base spring and heat shrink which can withstand catching tree branches and bushes in normal operating use.

We have tested the **WHIPSTICK** in unit roll over conditions in soft ground and the **WHIPSTICK** had survived, however we recommend that you do not try this.

The New All Terrain Vehicle and Snow Mobile **WHIPSTICK**,
"Clearly a new way to be seen."
