Electroluminescent
Lighted Safety Flag**

The New "WHIP STICK"

The "Whip Stick" Spring Steel Whip available in any length up to 10 feet.

The new **WHIP STICK** has been specially designed for reliability and function. You will never have to throw out another broken or malfunctioning whip again.

The new **WHIP STICK** has been designed with a Spring Steel Rod, Polycarbonate Tubing and Heat Shrink to eliminate the base springs required on Fiberglass Whips. Eliminating the Buggy Whip Base Springs eliminates the potential for shorting out of pinched wires and electrical failures due to electrical connections corrosion at the spring base and light socket and wires breaking inside of the Fiberglass Flag Staffs.

The new **WHIP STICK** construction prevents the possibility of the Fiberglass fracture fragments which may cause personal injury from damaged Fiberglass fragments.

The new **WHIP STICK** uses a removable 1156 Light Socket. The Brass 1156 Light Socket has an incorporated "O" Ring Seal to keep out moisture to prevent corrosion. A Stainless Steel ½ " base can be removed and the entire WHIP STICK can be shortened with little effort to suit any required length.

The new **WHIP STICK** can be custom built to any length to accommodate any application. The removable ends allow the user to adjust the lengths for special applications making the **WHIPSTICK** versatile for many applications. Extensions of 6" and 12" are available to meet the 12' Occupational Health and Safety Requirements.

The new **WHIP STICK** has been designed to allow the user to repair quickly in the event of damage to allow the unit to get back on the job quickly. All of the new **WHIP STICKS** can be rebuilt, repaired and all parts are readily available.

The new **WHIP STICK** is a Canadian designed & manufactured product by the Safety Innovative Award Winning Company, HBM Canada Inc. With many years of hands on experience in harsh Canadian Environments, you can trust the quality of our products.
